

WEPD – Type I [62, 31, 12]

This is a database of known weight enumerator parameters for singly-even binary self-dual [62, 31, 12] codes.

The possible weight enumerators of a singly-even binary self-dual [62, 31, 12] code are given in [1] as

$$\begin{aligned}W_{62,1} &= 1 + 2308x^{12} + 23767x^{14} + \dots, \\W_{62,2} &= 1 + (1860 + 32\alpha)x^{12} + (28055 - 160\alpha)x^{14} + \dots,\end{aligned}$$

where $\alpha \in \mathbb{Z}$.

See the link below for a list of known values of α for $W_{62,2}$. A code with weight enumerator $W_{62,1}$ is given in [4].

- [W_{62,2} known parameters](#) (from [1–6])
