

## WEPD – Type I [84, 42, 14]

This is a database of known weight enumerator parameters for singly-even binary self-dual [84, 42, 14] codes.

The possible weight enumerators of a singly-even binary self-dual [84, 42, 14] code are given in [1, 3] as

$$\begin{aligned}W_{84,1} &= 1 + (4080 - \alpha)x^{14} + 39524x^{16} \\ &\quad + (247264 + 14\alpha)x^{18} + \dots, \\W_{84,2} &= 1 + (4080 - \alpha)x^{14} + (28644 + 64\beta)x^{16} \\ &\quad + (390368 + 14\alpha - 384\beta)x^{18} + \dots, \\W_{84,3} &= 1 + (4080 - \alpha)x^{14} + (28644 + 64\beta)x^{16} \\ &\quad + (394464 + 14\alpha - 384\beta)x^{18} + \dots,\end{aligned}$$

where  $\alpha, \beta \in \mathbb{Z}$ .

See the links below for lists of known values of  $(\alpha, \beta)$  for  $W_{84,1}$ ,  $W_{84,2}$  and  $W_{84,3}$ .
